MASTER CONCEPT NOTE · BOARD OF ADVISORS

Plexus AI

HOSPITAL-EMBEDDED COE

# Where Clinical AI Gets Tested, Trusted, and Deployed.

A structured ecosystem where healthcare AI is not only developed — but meaningfully validated inside real hospital workflows.

Built to earn the trust of clinicians, regulators, and investors simultaneously.

INTRODUCTION

## What is Plexus AI?

Plexus AI is a hospital-embedded Centre of Excellence (CoE) focused on the real-world validation and deployment of healthcare AI and MedTech solutions.

The objective is to create a structured ecosystem where innovation is not only developed, but meaningfully tested, validated, and integrated into live clinical workflows.

THE PROBLEM

## Why AI fails at the last mile

Despite rapid advancements, adoption of healthcare AI in real clinical practice remains severely limited. Promising technologies fail to translate into patient care.

- → Lack of real-world clinical validation
- → Limited doctor involvement in development
- → Poor integration into hospital workflows
- → Absence of structured real-world evidence (RWE)

> *The gap is not in innovation — it's in translation. No structured pathway exists in India for an AI tool to be tested in a real hospital, earn clinical evidence, and gain the trust of regulators, clinicians, and investors — simultaneously.*

OUR APPROACH

## From lab to live wards

Plexus AI bridges this gap by operating directly within a functioning hospital ecosystem.

- → Deployment of AI tools in real clinical environments
- → Active clinician participation in evaluation and feedback
- → Continuous data capture on usage, outcomes, efficiency
- → Structured validation and reporting for scale-up

MARKET CONTEXT

## The opportunity

**$45B**
India healthtech market by 2030

**<3%**
of deployed AI tools have structured validation

**500+**
healthcare AI companies with no clear pathway

**2–4**
years lost seeking independent hospital access

OPERATIONAL MODEL

## Five activities that drive validation

**01 Onboarding AI & MedTech**
Bringing high-potential solutions into the ecosystem for structured evaluation.

**02 Clinical Deployment**
Integration into OPD, IPD, ICU, and diagnostic workflows in partner hospitals.

**03 Doctor Feedback**
Structured clinician usage and feedback ensuring the physician voice shapes the tools.

**04 Data Capture & Analysis**
Monitoring clinical usage, outcomes, and operational impact.

**05 Validation & Reporting**
Generating real-world evidence to support regulatory submission, investor confidence, and hospital adoption at scale.

LEADERSHIP & EXECUTION

## The team building this

FOUNDER

**Dr. Amit Raj**

Physician & Healthcare Entrepreneur

Dr. Amit Raj leads Plexus AI with hands-on clinical practice and hospital operational experience. His core belief: healthcare AI must be validated in real patient environments to be truly impactful.

TECHNOLOGY DIRECTOR

**Anamika Singh**

Digital Architecture & AI Deployment

Building the digital infrastructure for clinical AI deployment — ensuring systems are practical, scalable, and usable within clinical environments.

- → HMS, diagnostics & workflow integration
- → Real-world evidence (RWE) data systems
- → Multi-centre platform architecture

STRATEGIC FOCUS AREAS

## Four pillars of the CoE

**Clinical AI Deployment**

Embedding AI into OPD, IPD, ICU, and diagnostic workflows where value is generated.

**Real-World Validation**

Structured methodologies producing credible, publishable real-world evidence.

**Doctor Adoption Framework**

Clinician usability and trust — adoption by doctors is the true measure of success.

**Evidence Generation (RWE)**

Real-world data assets for partnerships, regulatory pathways, and scale decisions.

ROADMAP

## Phased outcomes over 36 months

SHORT

**0–6 Mo**

- ✓ Operational framework established
- ✓ Initial AI / MedTech partners onboarded
- ✓ Pilot projects deployed in clinical settings
- ✓ Early validation insights generated

MID

**6–18 Mo**

- ✓ Structured validation model developed
- ✓ Partner ecosystem strengthened
- ✓ Measurable workflow improvements
- ✓ Initial revenue generation

LONG

**18–36 Mo**

- ✓ India's reference model for clinical AI validation
- ✓ Multi-centre deployment ecosystem
- ✓ Standardised validation framework & certification
- ✓ Global MedTech collaborations

BUSINESS MODEL

## How Plexus AI sustains and scales

PRIMARY

### Validation Programs

Startups pay a structured fee for end-to-end clinical validation, data capture, and RWE reporting.

SECONDARY

### Sponsored Research

Pharma and MedTech companies commission independent real-world evidence studies through the clinical network.

PIPELINE

### Grants & Partnerships

DST, BIRAC, and ICMR fund targeted programs aligned to national health priorities and digital health missions.

VALUE EXCHANGE

## What each party gives and gets

| PARTY | GIVES | GETS |
|---|---|---|
| **AI Startup** | Fee · data access | RWE · validation report · regulatory dossier |
| **Hospital** | Infrastructure · access | Revenue share · research output |
| **Clinician** | Feedback · time | Authorship · CME · better tools |
| **Pharma** | Study fees | Independent RWE · market access evidence |

COMPETITIVE POSITION

## Why Plexus AI, not alternatives

→ **vs AMTZ:** Hardware focus — no clinical AI validation or RWE methodology

→ **vs NASSCOM CoEs:** Software incubation — no hospital embedding or deployment track

→ **vs Innovation Cells:** Internal only — no structured multi-stakeholder model

→ **Plexus AI:** Only model combining hospital embedding + structured RWE + CDSCO-aligned validation

***Regulatory unlock:*** *CDSCO's SaMD guidelines require real-world clinical evidence for AI device approval. Plexus AI outputs are structured to directly feed regulatory dossiers — a pathway no other CoE provides.*

TARGET METRICS · YEAR 1

**10+**
tools in active validation by Month 12

**3+**
peer-reviewed publications in Year 1

**2**
CDSCO-aligned regulatory dossiers filed

**₹1Cr**
target revenue by end of Year 1

KEY STRATEGIC QUESTIONS

## Where we seek your guidance

As Plexus AI evolves, advisory input will be critical across five domains:

### 01 Model Design & Governance

- Is the CoE structure appropriate for scale and impact?
- What governance mechanisms should be built in early?

### 02 Clinical Integration

- How do we ensure sustained doctor adoption beyond pilots?
- Which specialties should be prioritised initially?

### 03 Validation Framework

- What parameters define robust clinical validation?
- How do we ensure credibility at national and global levels?

### 04 Partnership Strategy

- Which categories of startups should be prioritised?
- How should Plexus AI be positioned for top collaborations?

### 05 Scalability

- What is the optimal path beyond a single centre?
- How do we balance depth of validation with scale?

### ✉ Get in Touch

### A foundational layer for healthcare innovation

Plexus AI is an effort to build the infrastructure that India's healthcare AI ecosystem has been missing — where AI is not only created, but tested, trusted, and adopted in real clinical environments.

This initiative is in its formative phase, and the role of the advisory board will be instrumental in shaping its direction, structure, and long-term impact.

**We look forward to your guidance in strengthening and scaling this model.**
